# WEEBILL S

## Professional 3-Axis Stabilizer

Tiny body and giant power come at once!

WEEBILL-S easily handles mainstream DSLR cameras with top-notch performance. Thanks to its neat lightweight body and a unique Sling mode, WEEBILL-S brings an effortless shooting experience like never before.

Featuring an upgraded algorithm and stronger motors, an intelligent ViaTouch 2.0 system as well as an ultra-low latency HD image transmission module, WEEBILL-S pushes the limit of filmmaking even further.

Unleash boundless possibilities with WEEBILL-S!

# TINY GIANT

## FEATURES

### Supreme Power. Superior Compatibility

WEEBILL-S comes with the newest motor unit and upgraded algorithm, with 300% improvement in motor torque and 50% increase in responsiveness. With better power comes stronger compatibility, WEEBILL-S can easily handle mainstream mirrorless and DSLR camera & lens combos.

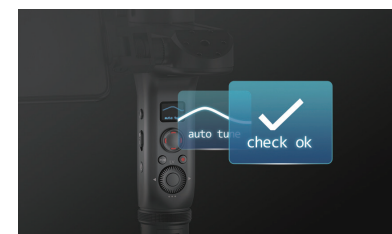

### Compact as a Piece of A4 Paper

The unique structure and minimum design of WEEBILL-S make it super compact as a piece of A4 paper. With the ergonomically designed Sling mode, WEEBILL-S provides an effortless shooting experience for anyone.

### Upgraded Image Transmission Module: Step into Stride

The all-new TransMount Image Transmission Module (accessory), in its compact size, can be directly mounted under the quick release plate neatly. With 1080P 30fps highly synchronised transmission (100-meter distance) featuring LUT, Pseudocolor, Focus peaking, Zebra Stripes and etc, professional monitoring and livestreaming can be easily achieved on a gimbal.

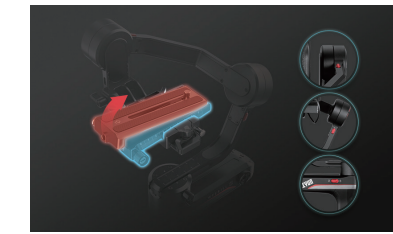

### Intelligent Auto Tune

WEEBILL-S is integrated with a brand new self-adaptive control algorithm, which can automatically recognize the product weight in an ultra-accurate way. Simply mount your camera onto WEEBILL-S and WEEBILL-S can auto tune its power to best adapt to your devices.

### Stay Focused All the Way

WEEBILL-S supports both electronic focus control and mechanical focus/zoom control through a handy control wheel on its body. Whatever camera & lens combo you're using, you can always pull focus or zoom precisely via the included cable and a servo motor.

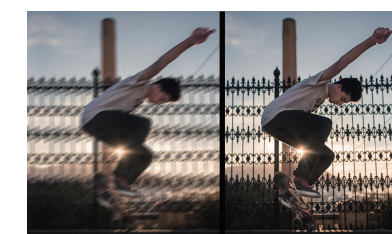

### Set-up and Pack-up at Ease

WEEBILL-S adopts the popular two-in-one quick release plates (Manfrotto/Arca-Swiss), allowing easy setup and fast transition between equipment without re-balancing. With the upgraded latch design, each axis can be easily locked for fast balance adjustment and neat storage.

### Modular Design

Using a professional monitor with the TransMount Image Transmission Package to get quality image even under the sun. Up to 3 devices can be connected for real-time monitoring. The brand new Wireless Remote Controller with built-in motion sensor ensures stable control over the stabilizer and camera even at long distance, offering you master level filmmaking experience, either you work alone or in a team.

### Responsive and Flexible than EVER

The upgraded 8th generation Instune algorithm provides high responsiveness and eliminates jittery in fast movement in any environment. Not only that, you can quickly adjust the speed and various parameters of each axis directly through the dial on the handle itself, giving you responsive and flexible control than ever!

### ViaTouch 2.0: Your Finger-Touch Vision World

ViaTouch 2.0 seamlessly connects your smartphone, camera and gimbal with 100% increase in response speed. Various gimbal and camera settings can be adjusted in real time. SmartFollow and Sync Motion give you unprecedented control over your camera just at fingertips.
